1 Explanatory Notes

1.1 Release Notes v7

Demscore provides worldwide free access to harmonized data on Democracy, Environment, Migration, Social Policy, Conflict and Representation from several of the world's most prominent social science research institutes. The interdisciplinary nature of Demscore data facilitates large-scale comparative analyses. This is essential to advance adequate policy responses to complex societal challenges associated with the Sustainable Development Goals (SDGs) and beyond, facing Sweden, Europe, and the world today.

With a firm commitment to transparency and openness, Demscore v7 enables users to gain comprehensive insights into various topics across the social sciences. The joint infrastructure ensures data integrity and quality at the highest international standards and maximizes usability in the measurement of contextual data with over 25.000 variables across nearly all countries in the world, from 1750 to the present.

This creates critical time- and cost saving advantages in data collection, management, distribution, and not the least for end-users in the scientific community. Demscore's unique approach to translating and merging data scales up to more than 410.000 variable versions available in the infrastructure, storing more than 10 billion non-missing observations.

This collaborative effort between leading Swedish universities pushes the scale of social science data to a new level and offers unprecedented possibilities for interdisciplinary research and knowledge advancement.

These are the key features of Demscore:

1. **Customized Download:** A fully normalized, joint PostgreSQL database, sophisticated programming, and a user-friendly web-based interface for users to generate custom-designed datasets and codebooks for download.
2. **Translations and Data Merges:** Demscore currently offers more than 1100 merge options between datasets.
3. **Metadata:** Demscore takes information on and organization of metadata to new heights with the inclusion of customized codebooks, a detailed methodology document, and a comprehensive handbook.
4. **Handling of Missing Data:** Demscore pioneers in developing an innovative approach to tackle missing data. Researchers can now account for missing values with increased precision, leading to more robust and reliable analyses.
5. **Merge Scores:** Demscore introduces a unique merge mechanism. This powerful tool enables researchers to combine datasets effortlessly, uncovering connections and patterns that were previously hidden in isolated data silos.
6. **Thematic Datasets:** Demscore provides researchers with curated thematic datasets, each focused on a specific topic. These datasets bring together relevant variables from across the Demscore partners, facilitating in-depth investigations and comprehensive analyses of specific domains.
7. **Interactive Web Portal:** In addition to all the above, Demscore's web portal offers interactive visualization tools, user support and additional information on all partners and data sources.

For more information, please visit `https://www.demscore.se/` or contact contact@demscore.se.

1.2 New in Demscore version 7

A detailed description of changes and additions made for version 7 compared to version 6 can be found in the Methodology Document.

1.3 The Demscore Codebook

The autogenerated Demscore Codebook lists variable entries for those variables chosen by the user along with citation guidelines and licenses per variable.

The meta data is extracted from the codebooks per dataset stored in a table in the Demscore PostgreSQL database with one row per variable for all datasets. This table includes codebook entries, variable tags, labels, and other variable information in LaTeX format used to generate an automated codebook.
Demscore maintains a single set of standard entries for metadata across all datasets, to which all project members contribute their information. Additionally, variables within different datasets may have varying sets of additional information requirements specific to each dataset. These dataset-specific entries are also included, but they are presented as variable-specific metadata beneath the standard entries.
At the outset of the harmonization process, Demscore underwent a thorough variable name cleanup. This involved tasks such as replacing spaces or dots in variable names with underscores and converting all letters to lowercase. Notably, the original tags remain preserved and stored in the PostgreSQL table. Each variable in Demscore is accessible in both short and long forms. The short form comprises the cleaned version of the original variable tag, while the long form starts with the dataset name from which it originates, followed by the cleaned variable name.

For instance, the original name of the variable *MinisterPersonalID* from the H-DATA Foreign Minister Dataset is included as *ministerpersonalid* (short form) and *hdata_fomin_ministerpersonalid* (long form) in Demscore.

In addition, each dataset includes Demscore unit-identifier variables which are named according to the following naming scheme: Beginning with u_, followed by the name of the primary unit and finally the variable tag. The *year*- variable from the COMPLAB SPIN The Out-of-Work Benefits Dataset (OUTWB), which is part of the primary unit u_complab_country_year has the Demscore unit identifier name *u_complab_country_year_year*.

1.4 Methodology

For details on our methodology please see the Demscore Methodology document available for download on the Demscore website.

1.5 Citations

The Demscore project does not have a formal citation of its own. Hence, when using Demscore, we suggest that you cite the respective projects and datasets. We indicate how every dataset is to be cited in the autogenerated codebook you retreive with your data download, both in the dataset description and the codebook entry for each variable. Most often it is sufficient to cite the dataset a variable originates from, but sometimes there is a variable specific citation listed in the codebook entry in addition to that. For these cases, please also add the variable specific citation to the reference list of your publication. Full references are linked in the codebook entries of the variables and listed in the codebook's bibliography. We suggest you to also cite the Demscore Methodology Document when using data retrieved through Demscore.

1.6 Missing Data

Demscore indicates different types of missingness for observations in the customized datasets:
Missing in original data = Whenever an observation in the original variable is a missing (NA, missing code such as 7777, blank cell), we preserve this missing value. When the original source has special codes for various types of missing, those are preserved.
Missing code: -11111 = Demscore code for observation is missing due to the translation/merge, i.e., missing data due to no data being included for this combination of identifiers in the end Output Unit.
Missing code: -22222 = No observation is merged/translated, but the original data contains information for these identifier combinations elsewhere. For these cases, we use a different code. The

user needs to consult the reference documents (Methodology Document Section 5.1. or the Demscore Handbook) to clarify why the translation to the identifier combinations in the end Output Unit was not possible.

Please note that an observation that is missing in its original output unit does no take the value -11111, but appears as NA/blank cell in the customized dataset.

1.7 Download ID

The download ID can be shared with other users for replication purposes. A user can type the download ID into the Demscore website and retrieve the same download selection and files as the original user. This ID is autogenerated for each download from the Demscore website and will always retrieve the same data, even if the Demscore version was updated in the meantime.

Download ID: 2ee386d8-5059-4111-b43f-19a42c662840

1.8 Unit Identifier Variables

An Output Unit is defined as an output format in which variables can be retrieved from one or more datasets through a strictly defined output grid. A unit table defining this output grid contains unit identifier columns with u_ prefixes and the table is sorted based on these unit identifier columns and has a fixed number of rows. Unit columns are based on the columns that constitute the unit of analysis in a dataset. They are added to the original dataset and marked by a unit prefix (consisting of a u_ and the dataset unit name) before the original variable name. Unit columns can contain slightly modified data, e.g., missing values are replaced by a default value. Sometimes we add additional columns to the unit table, for instance if a dataset includes both a country_id column with a numeric country code, we add the variable storing the full country name to the unit table as well for better readability.

1.9 Output Unit Identifier Variables in the Chosen Unit

u_repdem_country_year_country: This column is a created from *country_id* by merging in the full country names.

u_repdem_country_year_year: The years in this column are extracted from the *year* column.

2 REPDEM

The **Representative Democracy Data Archive (REPDEM)** presents the comparative data collection efforts undertaken by various research and data infrastructure projects on political institutions, political parties, cabinets and governments in Europe. As a world-leading database for research on the competition for government in Europe, the archive contains unique data on governments, parliaments, political parties, length of government formation periods, bargain rounds, as well as procedures and mechanism for intra-coalition governance, etc. The latest updates were made in the research infrastructure project Party Government in Europe Database (PAGED). PAGED builds on REPDEM's previous international and comparative projects on European parliamentary democracy. More information is available on the project's website: `http://repdem.org`

2.1 REPDEM Basic

Dataset tag: repdem_basic

Output Unit: Repdem Cabinet-Date, i.e., data is collected per cabinet and date. The unit for this dataset is a cabinet and the day a cabinet started. That means each row in the dataset can be identified by a cabinet in combination with a date, using the columns cab_name and date_in. The unit can also be expressed using the columns cab_id and date_in.

Description: Party Government in Europe Database (PAGED) – Basic dataset, is a research infrastructure project that aims to build a state-of-the-art database for comparative coalition research on political institutions, political parties, parliaments and governments.

This comparative dataset builds on previous datasets (Andersson et al 2020, Bergman et al 2019, Bergman et al 2021, Bergman et al 2024, Hellström et al 2021, Strøm et al 2008), and has been updated in-house to cover additional years, additional countries (vetted by county experts), and additional variables. The dataset provides detailed information on important aspects of government formation and government termination in 33 parliamentary democracies from 1943 (or their democratic transitions) up to late-2025.

Dataset citation:
Hellström, Johan, Torbjörn Bergman, Jonas Lindahl, and Elsa Karlsson Gustafsson (2026). The Representative Democracy Data Archive (REPDEM) – Basic dataset, Version 2026.02. REPDEM is part of and funded by DEMSCORE, a national research infrastructure (grant 2021-00162 from the Swedish Research Council). Available on `https://repdem.org`.

Comments:

License: REPDEM presents the comparative data collection efforts undertaken by various research and data infrastructure projects on political institutions, political parties, cabinets and governments in Europe.
Repdem offers a range of datasets available for free (without even a demand for registration).

More detailed information on the dataset can be found at the following web page: `https://repdem.org/index.php/current-dataset/`

2.1.1 Cabinet Information

These variables provide information on the Cabinet composition.

2.1.1.1 Cabinet composition (cab_composition1)

Long tag: repdem_basic_cab_composition1

Original tag: cab_composition1

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Party abbreviations (see party codebook). List of cabinet parties, beginning with the party of the PM.

2.1.1.2 Cabinet composition (cab_composition2)

Long tag: repdem_basic_cab_composition2

Original tag: cab_composition2

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Party Ids (see party codebook). List of cabinet parties, beginning with the party of the PM.

2.1.1.3 Cabinet duration (cab_duration_days)

Long tag: repdem_basic_cab_duration_days

Original tag: cab_duration_days

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1110, Percent: 92.96

Non-missing observations in chosen unit: Sum: 1998, Percent: 97.51

Description:

Measured in days. Defined as the time period between cabinet's first and last day in office.

2.1.1.4 Cabinet (cab_name)

Long tag: repdem_basic_cab_name

Original tag: cab_name

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Cabinet name (name of the PM consecutively numbered with Roman figures).

2.1.1.5 Number of cabinet parties (cab_num_parties)

Long tag: repdem_basic_cab_num_parties

Original tag: cab_num_parties

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Number of cabinet parties

2.1.1.6 Cabinet seat share (cab_seatshare)

Long tag: repdem_basic_cab_seatshare

Original tag: cab_seatshare

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1136, Percent: 95.14

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Cabinet seat share (0-1)

2.1.1.7 Date in (date_in)

Long tag: repdem_basic_date_in

Original tag: date_in

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

First day in cabinet life according to official criteria defined as:
(a) date that PM/cabinet was appointed by head of state
(b) date of investiture vote in parliament
(c) date of general election

2.1.1.8 Election date (elecdate)

Long tag: repdem_basic_elecdate

Original tag: elecdate

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Date of most recent parliamentary election:
(a) two-round elections: date of second round
(b) elections held over several days: date of last day

2.1.1.9 Effective number of parliamentary parties: lower chamber (enpp)

Long tag: repdem_basic_enpp

Original tag: enpp

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1136, Percent: 95.14

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

All legislators subsumed under 'others' treated as one single party (minimum fragmentation)

2.1.1.10 Number of days required for cabinet formation (form_duration_alt)

Long tag: repdem_basic_form_duration_alt

Original tag: form_duration_alt

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1135, Percent: 95.06

Non-missing observations in chosen unit: Sum: 2034, Percent: 99.27

Description:

Measured in days. Number of days since the election OR the 'Date out' of previous cabinet if it is terminated between elections. Thus, this alternative measurement ignores/doesn't count the time between 'Date out' of previous cabinet and the election date.

2.1.1.11 Government type (govtype)

Long tag: repdem_basic_govtype

Original tag: govtype

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

1: Min Minority cabinet: Holds less than 50 percent plus one seat in parliament. Single-party minority cabinets are likewise coded as 'Min'.
2: Maj Single-party majority cabinet: Holds 50percent plus one seat in parliament. Is not a coalition.
3: Mwc Minimal winning coalition: Is turned into a losing coalition by the subtraction of any of the coalition parties, i.e., if it loses a coalition party it holds less than 50 percent plus one seat.
4: Sur Surplus majority coalition: Can lose a coalition party and still be winning, i.e. control 50 percent plus one seat or more in the parliament
5: Non A non-partisan cabinet, e.g. appointed by a president to hold an election

2.1.1.12 Number of parties in parliament (num_parties)

Long tag: repdem_basic_num_parties

Original tag: num_parties

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1141, Percent: 95.56

Non-missing observations in chosen unit: Sum: 2047, Percent: 99.9

Description:

Number of parties in parliament. All parties, excluding 'others'.

2.1.1.13 Total number of seats: upper chamber (upper_seats_total)

Long tag: repdem_basic_upper_seats_total

Original tag: upper_seats_total

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 303, Percent: 25.38

Non-missing observations in chosen unit: Sum: 427, Percent: 20.84

Description:

Total number of seats (upper chamber)

2.1.1.14 Total number of seats: lower chamber (seats_total)

Long tag: repdem_basic_seats_total

Original tag: seats_total

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 1111, Percent: 93.05

Non-missing observations in chosen unit: Sum: 2040, Percent: 99.56

Description:

Total number of seats: lower chamber

2.1.1.15 Parliamentary polarization, CHES general left-right scale (lrgen) (parl_polar_ches)

Long tag: repdem_basic_parl_polar_ches

Original tag: parl_polar_ches

Dataset citation: Hellström et al. (2026)

Merge scores:

Non-missing observations in original unit: Sum: 341, Percent: 28.56

Non-missing observations in chosen unit: Sum: 593, Percent: 28.94

Description:

Measured as the standard deviation from the weighted (by seats) mean position in parliament, based on the Chapel Hill Expert Survey's general left-right scale (lrgen).

2.2 REPDEM PAGED Western, Central and Eastern Europe

Dataset tag: repdem_wecee

Output Unit: Repdem Cabinet-Date, i.e., data is collected per cabinet and date. That means each row in the dataset can be identified by a cabinet in combination with a date, using the columns cab_name and date_in. The unit can also be expressed using the columns cab_id and date_in.

Description: This dataset contains data on governments, parliaments, political parties, and political institutions for Western Europe until 2019 and data for Central and Eastern Europe until 2021.

It includes data collected by experts on coalition politics in their respective countries using standardised coding instructions and interview guidelines. Specifically, the data were gathered from official documents (government, administration, and parliament) and party documents (election manifestos, coalition agreements), by conducting semi-structured interviews with (former) staff and cabinet members as well as a systemic analysis of media reports.

Dataset citation:

2.2.1 Information on the Cabinets

These variables provide general information on each cabinet such as duration, cabinet composition and majoritiy relations.

2.2.1.1 Cabinet composition (cab_composition1)

Long tag: repdem_wecee_cab_composition1

Original tag: cab_composition1

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Party abbreviations (see party codebook). List of cabinet parties, beginning with the party of the PM.

2.2.1.2 Cabinet composition (cab_composition2)

Long tag: repdem_wecee_cab_composition2

Original tag: cab_composition2

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Party Ids (see party codebook). List of cabinet parties, beginning with the party of the PM.

2.2.1.3 Cabinet duration (cab_duration_days)

Long tag: repdem_wecee_cab_duration_days

Original tag: cab_duration_days

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Measured in days. Defined as the time period between cabinet's first and last day in office.

2.2.1.4 Cabinet (cab_name)

Long tag: repdem_wecee_cab_name

Original tag: cab_name

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Cabinet name (name of the PM consecutively numbered with Roman figures).

2.2.1.5 Number of cabinet parties (cab_num_parties)

Long tag: repdem_wecee_cab_num_parties

Original tag: cab_num_parties

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Number of cabinet parties

2.2.1.6 Cabinet seat share (cab_seatshare)

Long tag: repdem_wecee_cab_seatshare

Original tag: cab_seatshare

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 771, Percent: 64.57

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Cabinet seat share (0-1)

2.2.1.7 Date in (date_in)

Long tag: repdem_wecee_date_in

Original tag: date_in

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:
First day in cabinet life according to official criteria defined as:
(a) date that PM/cabinet was appointed by head of state
(b) date of investiture vote in parliament
(c) date of general election

2.2.1.8 Election date (elecdate)

Long tag: repdem_wecee_elecdate

Original tag: elecdate

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:
Date of most recent parliamentary election:
(a) two-round elections: date of second round
(b) elections held over several days: date of last day

2.2.1.9 Effective number of parliamentary parties: lower chamber (enpp)

Long tag: repdem_wecee_enpp

Original tag: enpp

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:
All legislators subsumed under 'others' treated as one single party (minimum fragmentation)

2.2.1.10 Number of days required for cabinet formation (form_duration_alt)

Long tag: repdem_wecee_form_duration_alt

Original tag: form_duration_alt

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 771, Percent: 64.57

Non-missing observations in chosen unit: Sum: 1447, Percent: 70.62

Description:
Measured in days. Number of days since the election OR the 'Date out' of previous cabinet if it is terminated between elections. Thus, this alternative measurement ignores/doesn't count the time between 'Date out' of previous cabinet and the election date.

2.2.1.11 Government type (govtype)

Long tag: repdem_wecee_govtype

Original tag: govtype

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 771, Percent: 64.57

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

1: Min Minority cabinet: Holds less than 50 percent plus one seat in parliament. Single-party minority cabinets are likewise coded as 'Min'.

2: Maj Single-party majority cabinet: Holds 50percent plus one seat in parliament. Is not a coalition.

3: Mwc Minimal winning coalition: Is turned into a losing coalition by the subtraction of any of the coalition parties, i.e., if it loses a coalition party it holds less than 50 percent plus one seat.

4: Sur Surplus majority coalition: Can lose a coalition party and still be winning, i.e. control 50 percent plus one seat or more in the parliament

5: Non A non-partisan cabinet, e.g. appointed by a president to hold an election

2.2.1.12 Number of parties in parliament (num_parties)

Long tag: repdem_wecee_num_parties

Original tag: num_parties

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Number of parties in parliament. All parties, excluding 'others'.

2.2.1.13 Total number of seats: upper chamber (upper_seats_total)

Long tag: repdem_wecee_upper_seats_total

Original tag: upper_seats_total

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 228, Percent: 19.1

Non-missing observations in chosen unit: Sum: 329, Percent: 16.06

Description:

Total number of seats (upper chamber)

2.2.1.14 Total number of seats: lower chamber (seats_total)

Long tag: repdem_wecee_seats_total

Original tag: seats_total

Dataset citation: Hellström et al. (2025), Bergman & Hellström (2021), Bergman & Hellström (2024)

Merge scores:

Non-missing observations in original unit: Sum: 772, Percent: 64.66

Non-missing observations in chosen unit: Sum: 1449, Percent: 70.72

Description:

Total number of seats: lower chamber
